## Bridge deck permanent formwork

EMJ were asked to design and provide a Coper GRP as a replacement for the more traditional prefabricated coper. Read more - We would like to thank all our customers for a great 2017, we look forward to working with all of you in the new year and we wish you and your families, all the best in 2018. Read more - Page 2 Project Camana Bay, Grand Cayman-It; Rental Client Cayman Shores Development Limited is very pleased to have worked closely with Decco Ltd to provide more than 6,000 m2 of GRworkP Permaforms form panels on this project. Despite the mileage and time difference between the two countries, we worked together to ensure that the panels were designed to meet both the requirements and the feasible installation. By working closely together, from the outset played a decisive role in the delivery of the panels in order of installation priority, in size and on time despite the 26-day shipment. This program is part of a \$300 million investment in Camana Bay. EMJ continues to work with Decco on ongoing projects. Advanced design to suit different sections of bridges, viaducts and underpasses and other horizontal reinforced concrete structures. ENKOFORM HMK beam formwork applications are: Bridge of the constant section as well as the varying size and width of thick underpass slabs and Formwork overpasses for bridge construction by gradually launching components of devices adaptable to different applications. 1. Walers: main beams that follow the profile of the bottom and wings of the bridge. They are connected to each other with connectors2. Push-pull connectors and accessories: they are used to join walers to give the formwork with the required shape3. VM-20 beams: secondary beams4. Bracing Bracing safety items5. Shuttering Face Benefits Versatility for building bridges Excellent fit to the shape of the section with the connectors. Adaptable to different configurations: Bridges of constant and variable cross sections (solid or hollow) Variable bridge depth bridges (solid or hollow) Bridges with underpasses and Form overpasses work for building bridges with incremental large-thick launch slabs High rigidity sets needed to handle and transport quick stripping formwork units The page you were looking for has not yet been built. Let's start this party again! Try searching this website or going back to the home page or using alternately the navigation above :) Gallery Overview Projects Catalogues Videos Related Products ENKOFORM HMK is a horizontal beam formwork system adaptable to different geometries in the field of public works. Advanced design to suit different sections of bridges, viaducts and underpasses and other horizontal reinforced concrete structures. The ENKOFORM HMK beam formwork applications are: Bridge bridges of the constant section as well as the variable size and width of large-thick underpass slabs and Formwork overpasses for bridge construction by the gradual launch components of devices adaptable to different applications. 1. Walers: main beams that follow the profile of the bottom and wings of the bridge. They are connected to each other with connectors2. Read more bridge Forms Our manufactured bridge shapes are ideal for special design applications, tight construction schedules, fast installation processes and innovative solutions. Read more Bridge Railing Systems .B. Foster manufactures and sells pre-designed and approved railing systems for state and other specific agencies. Read more aluminum platform We offer advanced aluminum deck design technologies that provide lightweight abandonment platform solutions with quiet driving and an infinite life of fatigue. Read the alternative applications Our lightweight deck which is solid and designed for handling heavy rolling loads also has a multitude of other uses in non-bridge applications. Read more Gallery Overview Projects Catalogues Videos Related Products ENKOFORM HMK is a horizontal form work system based on the adaptable beam to various geometries in the field of civil work. Advanced design to suit different sections of bridges, viaducts, underpasses and other horizontal reinforced concrete structures. Applications of the horizontal platform with HMK ENKOFORM beams are: Bridge bridges of the constant section as well as the variable height and width section Thick slabs Underpasses and Formwork viaducts for the construction of bridges by incremental segments Features Components adaptable to different applications. Walers: main beams that follow the profile of the bottom and wings of the bridge. They are connected to each other with connectors and push-pull accessories: are used to join the walers to give the shape of the required shape VM20 beams: secondary bracing beams and safety items Forming versatility face benefits for building bridges Excellent fit to the shape of the section with the connectors. Adaptable to different configurations: Constant and variable cross section bridges (solid or hollow) Bridges of variable bridge depth (solid or hollow) Bridges with very high altitude sets of high rigidity necessary for the handling and rapid transport of formwork units We maintain a user-friendly technical assistance service that is freely available to all consulting engineers, and contractors to assist in all aspects of ComFlor® composite design. The services we offer include: Help the specifier, the team is able to provide design calculations, usually dictated by the state of the construction stage, the load and range required for the service and the fire resistance required for the slab. Our team can also help you with specialized design issues such as point loads, requirements for anti-crack mesh, openings, etc. VibrationComFlor® composite floors may meet the most rigorous vibratory applications, such as those required for the operating rooms of the National Health Service. ComFlor® Software Software Toolscomprehensive is free to download here. ComFlor® software provides quick and easy calculations for different categories of buildings, loads, fire performance, spans, vibrations, point loads and line loads. Regular updates are sent to all registered users. To download ComFlor® 9.0.34 software for the Middle East Only one version of this software, using the usual dimensions for the Middle East market, is available and can be downloaded here. Support beam widthFor all ComFlor tables® 46 load/span tables, the width of the support beam used is assumed to be 152 mm. Fire designThe capacity of the burning composite slab can be calculated using two methods, either Mesh and Bridge Fire Method (mesh only and no strengthening of the trough bar) or Bar fire method (strengthening the bottom hollow bar only with no contribution from the mesh and profile). Specification ServiceOur team @ ComFlor are able to provide a full specification to ensure that the correct composite floor specification is included in the contract documents. In-house seminars aimed primarily at engineers and architects, these free seminars last about 50 minutes, ending with a question and answer session and are delivered by our experienced regional teams. Topics include: Composite floor platform in construction. Structural roof terrace in construction. Steel building envelope systems for non-domestic buildings. Factory Visit - Insulated Panel Line at Shotton Works. To request a cpd seminar please click here. Here.
